# '<ByteResume>'

Bringing Structure to IT  
Careers – One Standard CV  
at a Time.

are you in? →

# How it works?

## {01} create an account

upload your information so we  
have something to work with

## {02} generate your CV

choose one template and  
let the magic happen

## {03} be seen

set your profile to public.  
our platform is not just a cv generator!  
you can filter the public profiles and find  
people with certain skills.  
you don't know when a recruiter is watching ;)

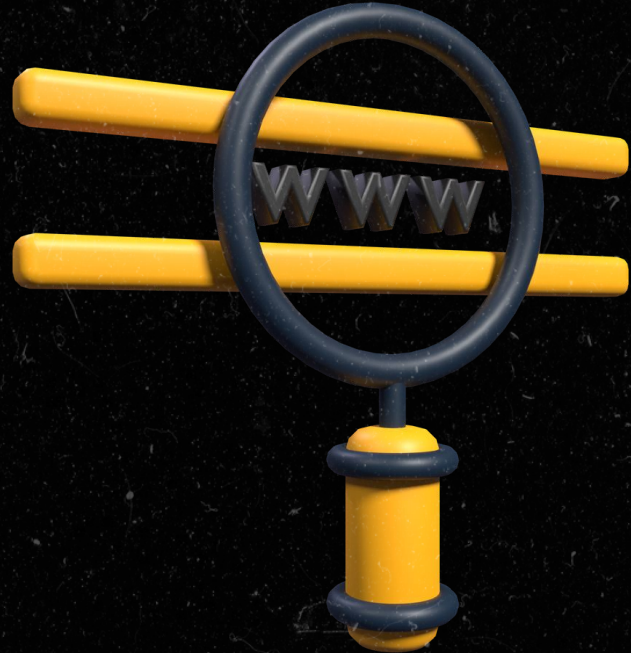

# Why our product?

**ByteResume eliminates the hassle of hunting for the “perfect” template.** Through extensive research, we’ve curated a selection of high-impact, professional templates tailored to IT and software development roles.

**Our mission goes beyond design** – we aim to establish a standardized CV format for the industry, ensuring clarity and consistency. With ByteResume, even newcomers can confidently present their skills and experience, making their job search smoother and more focused.

# Why Standardization Matters {

In the fast-evolving world of IT and software development, having a consistent and structured CV can make all the difference. Standardization ensures:

## Fairer Evaluations

Recruiters can quickly assess skills and experience without being distracted by inconsistent formats.

## Better Matching

A well-organized CV highlights the right keywords, making it easier for ATS (Applicant Tracking Systems) to identify suitable candidates.

## Less Guesswork

Junior candidates and career switchers benefit from a clear template, guiding them to present relevant information effectively.

## Stronger Industry Identity

A standardized format reflects the professionalism and expectations of the IT world, setting everyone up for success.

With **ByteResume**, we're not just building resumes — we're shaping the future of IT recruitment.

# Our tech stack

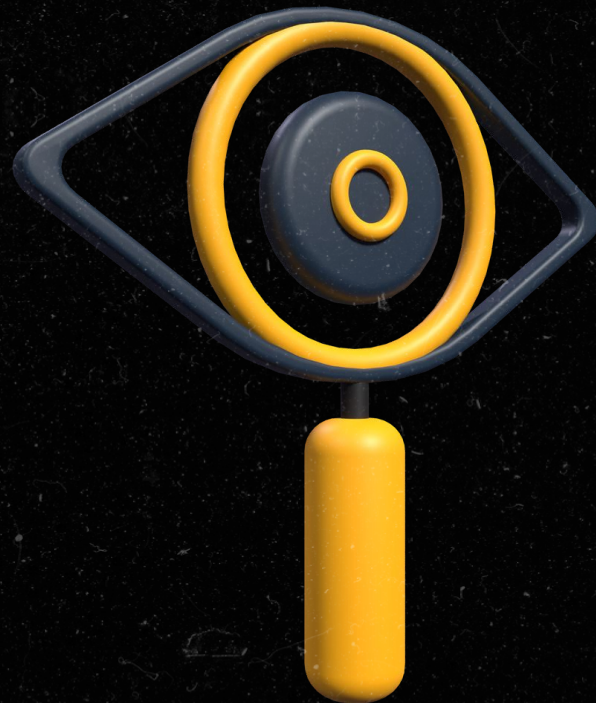

## Languages

JavaScript, Python, MongoDB

## Frameworks

React, Django
